## PROJECTS

### The Omniglot Project

Github ✍

Brain and Cognitive Society, IIT Kanpur

May'20 - July'20

- This project was aimed at understanding and solving the problem of one-shot learning.
- Implemented SOTA meta-learning models to solve one-shot classification and generative problem.
- Used architectures like GANs, VAEs, LSTMs and bayesian statistics to develop models in PyTorch.

### Autonomous Humanoid(AUTOMI)

Github ✍

Team Humanoid, IIT Kanpur

Sep'19 - Present

- Involved in the development of a complete, highly optimised software stack for AUTOMI.
- AUTOMI v1 is designed for autonomous navigation in a static environment using techniques like depth estimation, SLAM, object recognition, avoidance, lane detection etc.
- The software stack is based on ROS, with image processing using OpenCV.

### Following Sub-Population Signals

Github ✍

Mentor: Prof. James Murray, University of Oregon

July'20

- The goal was to reveal more insights about the connection between different brain areas and how the sub-populations communicate, like order of firing of specific neuronal type, and the correlation between order of firing between different brain regions.
- This analysis was performed on Steinmetz dataset, as a part of Neuromatch Academy 2020.
- Techniques such as Granger Causality, PCA, dPCA, Markov Models were used.

### PETcat

Github ✍

Robotics Club, IIT Kanpur

April'20 - Present

- Aimed at developing a biologically inspired robotic cat.
- Simultaneous Localization and Planning Algorithms like orb-SLAM, gmapping, roVIO were implemented and benchmarked.
- Currently involved in optimization of software stack using storage optimization, multi-threading etc.
